## Vintage Terraforce

Mr. L.C. Fourie purchased this steeply sloping (10,5 m difference in elevation) vacant lot during 1991. Situated on a sand dune overlooking Outeniquabeach, there was the need to create level platforms for the new house and garden.

After investigating various options. Mr. Fourie chose Terraforce L13 blocks for economy, ease of installation and environmental compatibility. Almost 3000 blocks were used to create four meandering terraces including eight connecting stairways. The owner and one assistant, working as time and weather permitted, completed installation early 1992.

All stairs are partially filled with concrete in matching colour with embedded beach pebbles. Planting was chosen from the Terraforce plant list and as suggested by the local nursery.
